"**Linear Tactile Nanodevice with Resolution on Par with Human Finger**" Optical MEMS and Nanophotonics, 2007 IEEE/LEOS International Conference on Publication Date: Aug. 12 2007-July 16 2007 [Comment: Touch is not a tactile problem, but a physics problem. Tactile resolution can signal velocity reduction and jumpulse.]
38. M. T. Mason, S. S. Srinivasa, A. S. Vazquez, and A. Rodriguez, "**Generality and Simple Hands**" Robotics Institute, Carnegie Mellon University, Technical Report CMU-RI-TR-10-40, 2010 [Comment: Jumpulse and the Law of Touch are neither understood nor used.]
39. Sachin Chitta, Matthew Piccoli and Jurgen Sturm "**Tactile Object Class and Internal State Recognition for Mobile Manipulation**" Forum: ICRA 2010
[Comment: The video experiments support that the strategy of prolonged contact employing the Law of Touch will allow the maximum force to be applied in gripping the egg without breaking it. The general principle is that velocity is harmful and acceleration is helpful in touch. These experiments should be redone based on the theoretical foundation in this proposed research.]
